

Fuel efficiency: Clay Pot Cooler (local refrigerator)

This picture shows a clay pot cooler (i.e., local refrigerator for produce) made and used by June Walker, Permaculture Network in Malawi founder, Thanthwe, Box 46, Monkey Bay.

The principle is to use water condensation which cools the pots and the air around the pots. To make the cooler you need a large clay pot, a smaller clay pot that will fit inside the large pot, sand, water, and a cover.
